

Backup as a Service (BaaS)

Off Site Client Backup

Data Center Side

- Backup as a Service (BaaS/SaaS) architecture
- (Web) GUI designed to manage an enterprise service
- Service cluster (load balancing + high availability)
- Multi-tenant / Multi-client (Roles/Permissions)
- Client repositories consolidation but segmentation (security)
- **Offline data center site restore to LAN Shared Folder, FTP, SSH, CD/DVD Burn, USB disk/stick (When client's link is down or any other cases)**
- Full Backup Cycle Management (Backup programming, Restore, Validation, Verification, Recycle, Reporting)
- Client state (error) monitoring
- Quota management (**email warning configuration**)
- WAN bandwidth/transmission optimization
- Repository encryption (Ciphers key per client)
- **Virtualized backup servers (is a plus)**
- Repository deduplication/compression (is a plus)
- **SNMP backup server healthness monitoring (is a plus)**
- Licensing scheme based on disk repository size or client numbers.
- Over licensing support is needed: due to average time to buy more licenses while accepting new clients

Client Side

- Unstructured data (compacted database dumps, compressed files, source files, office files) backup (0.5 – 1 TB daily per client) depending on link type and bandwidth
- VMWare/vCenter/Hyper-V/System-Center snapshot generation and backup
- GUI designed to assist and help client's backup operators
- Neither client side backup appliance nor dedicated backup server (All-in-one 100% software solution is the expectation)
- Active backup agents for unstructured data (Windows/Linux Operating Systems)
- Full Backup Cycle Management (Backup Programming, Restore, Validation, Recycle, Reporting) following roles/permissions assigned by the provider
- Backup download and client side GRANULAR restoration
- Quota revision (**email warning configuration**)
- Encryption before data transmission
- Deduplication/Compression before data transmission (on site processing).
- WAN bandwidth optimization and intermittency tolerance (Last byte restart)
- **Content filter by file type (is a plus)**
- **Virus scanning (is a plus)**
- Complete and simple recovery procedure from backup client/agent crash
